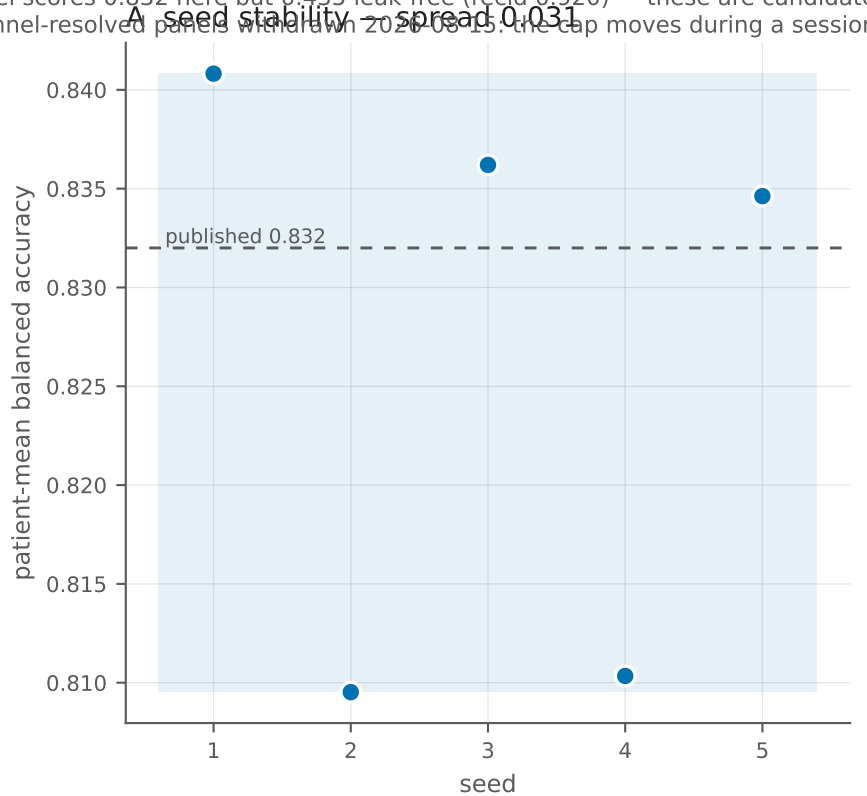
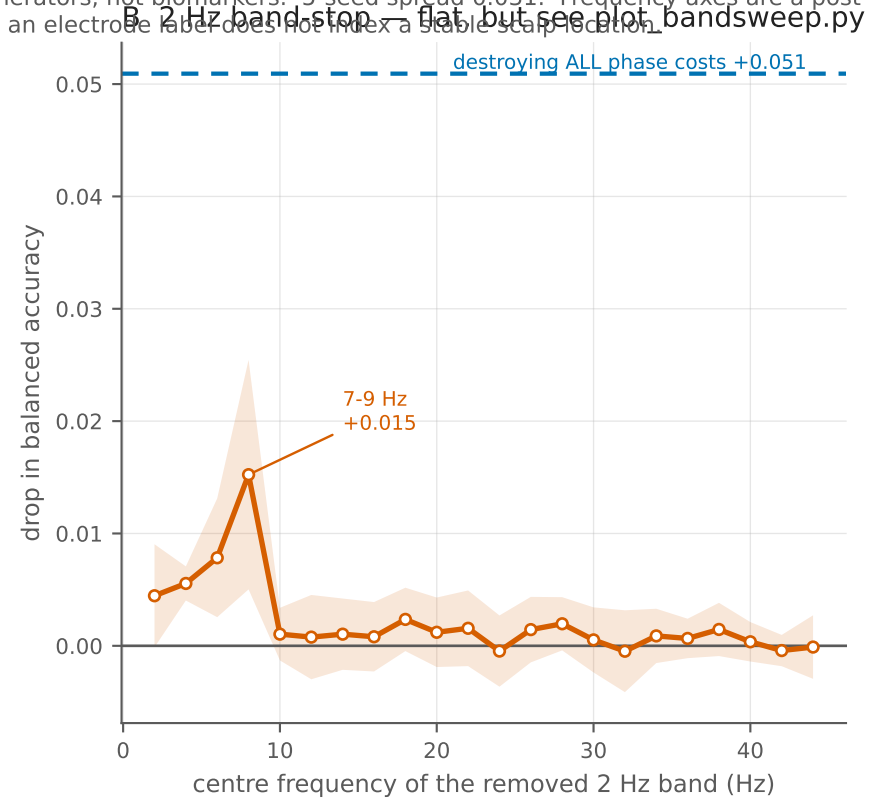
What did the pooled full fine-tune actually learn? (chan_z, duration-matched, toast→tea, 27 patients)




Model scores 0.832 here but 0.435 leak-free (recid 0.920) — these are candidate generators, not biomarkers. 5-seed spread 0.031. Frequency axes are a post-hoc lens: the model never saw a band definition.
Channel-resolved panels withdrawn 2026-08-15: the cap moves during a session, so an electrode label does not index a stable scalp location.
